RANCILIO COFFEE MACHINES: NEW FILTER AND SCREW

In **January 2024**, starting with the CLASS 5S with NF10417991 (PIN314233), a new FILTER, code **400100001**, was introduced on the entire Rancilio **line-up**, together with a new SCREW, code **370100000** (slightly shorter than the previous one, see photo).

With this new change, the funnel-shaped filter with this screw, the filter can be locked onto the coffee group.

For the 1GR (Vertical Boiler) models, **this** change was introduced in February 2024 with the PROMAC PU/16 - NF10418740 (PIN 316182).

In addition to the FILTER and SCREW for these groups, an AERATOR, code **23000458**, was also introduced. This aerator **was not affected by the change** for the Horizontal Boiler models **as it had already** been in use since 2019.

The KIT with code **10702057** including filter + countersunk screw can be purchased through **the Spare Parts Portal**.

As a reminder, the new stainless steel **nozzle**, code **23000510**, was introduced **last year**, which has **four Ø1.3-mm holes**. With its spherical shape and 4 holes **featuring** a slightly smaller diameter than the previous one, this nozzle creates a better vortex in the milk. **This** vortex breaks the micro-bubbles that form in the milk during **emulsification due** to a greater balance between the 'power' of the incoming and outgoing steam.

This nozzle comes standard on the **RS1, INVICTA, CLASSE 20, CLASSE 7, and CLASSE 5** models, as well as those with the **cool-touch** option.

The nozzle with four Ø1.5-mm holes, code 23000395, remains available as a spare part.

Rancilio Service is available for any **questions** or clarification.
